

Explaining the client

Watch and make notes

What is PALM 2?

It is the intelligence **that**...

What tasks can you use it for?

.....

When we give a definition we usually connect ideas. For example:

Version Control System (VCS): A VCS is a tool **that** tracks changes to source code over time. Instead of saying "Version Control System (VCS) is a tool. It tracks changes to source code over time, you combine the ideas using "that". (DEFINING)

Programmers use DBMSs, including MySQL, PostgreSQL, and MongoDB, **which** store and manage data for applications (NON DEFINING)

A Software Developer is a professional **who** designs, develops, and maintains software applications and systems. (DEFINING)

Programming languages, **which** include Python, C++, and Java, are essential tools for developers who write code to create software applications." (NON DEFINING)

🚀 Imagine you're talking to a client. How can you offer an explanation for these digital tools and programs?

Integrated Development Environment (IDE)

Django

GDB, Visual Studio Debugger, and Xcode Debugger

Scrum and Kanban

Ruby

🚦 **What Will happen in the future with AI technology? Make three predictions.**

Amaze (V) – Amazing (adj)

Joke

Understand

Explain

Study these phrases

In the short / long run

I come out trump

Fuss

Researchers (n) – research (v)
