Student B – Client Interview

You are the manager of a small logistics company. You need a programmer to design and monitor your employee´s payroll. The idea is that you have a first meeting with the programmer and engage in a "natural" conversation to start working for him / her. Below you will find some useful information but you may invent necessary details. You may also ask about the programmer's previous experience in similar projects.

Your needs:

-A program to monitor accounting and systematize payroll.

-Monitoring services for the program.

-Deadline: Up and running in two weeks.

-Users: one accountant in charge of the company´s administration and accounting.

Figure 1: Software you used in the past.
